

**Pregabalin Capsules BP 25/75 mg
PREGABALIN-GH® 25/75**

COMPOSITION:
Each hard gelatin capsule contains:
Pregabalin BP.....25 mg
Excipientsq.s.
Colour: Approved colour used in empty hard gelatin capsule shell.

Each hard gelatin capsule contains:
Pregabalin BP.....75 mg
Excipientsq.s.
Colour: Approved colour used in empty hard gelatin capsule shell.

CATEGORY: Anticonvulsant(Gamma Amino butyric Acid)

PHARMACEUTICAL DOSAGE FORM: Capsules

ROUTE OF ADMINISTRATION: Oral

DOSE:
PREGABALIN-GH is given orally with or without food. Gradual discontinuation over a period of one week is recommended.

Fibromyalgia:

- Administer in 2 divided doses per day
- Begin dosing at 150 mg/day
- May be increased to 300 mg/day within 1 week
- Maximum dose of 450 mg/day
- Dose should be adjusted for patients with reduced renal function

PHARMACOKINETICS:

Absorption:
Pregabalin is well absorbed after oral administration. When an oral administration of pregabalin under fasting conditions is given, the pharmacokinetic parameters are as follows: Tmax = 1.4 hours; Oral bioavailability = >90% (independent of dose); Time to steady state = 24–48 hours. It is also a substrate for the L-type transport system

Metabolism:
Pregabalin undergoes negligible metabolism in humans.

Distribution:
Apparent volume of distribution, oral administration = 0.5 L/kg. Pregabalin does not bind to plasma proteins

Elimination:
90% of the dose was recovered in the urine as the parent compound. The N-methylated derivative of pregabalin, the major metabolite was found in the urine and accounted for 0.9% of the dose. Pregabalin (S-enantiomer) did not undergo racemization to the R-enantiomer. Half-life is 6.3 hours. Renal clearance, healthy subjects = 67.0–80.9 mL/min. Because pregabalin is not bound to plasma protein, this rate suggests the involvement of renal tubular reabsorption.

Mechanism of action:
Pregabalin binds with high affinity to the α_2 -delta site (an auxiliary subunit of voltage-gated calcium channels) in central nervous system tissues. Although the mechanism of action of pregabalin is unknown, results with genetically modified mice and with compounds structurally related to pregabalin (such as gabapentin) suggest that binding to the α_2 -delta subunit may be involved in pregabalin's anticonvulsive and antiseizure effects in animal models. In vitro, pregabalin reduces the calcium-dependent release of several neurotransmitters, possibly by modulation of calcium channel function. Studies also suggest that the descending noradrenergic and serotonergic pathways originating from the brainstem may be involved with the mechanism of pregabalin. Interestingly, although pregabalin is a structural derivative of inhibitory neurotransmitter gamma-aminobutyric acid (GABA), it does not bind directly to GABA or benzodiazepine receptors. The sodium channels, opiate receptors, and cyclooxygenase enzymes are not involved with the mechanism of pregabalin. It is also inactive at serotonin and dopamine receptors and does not inhibit dopamine, serotonin, or noradrenergic reuptake.

INDICATIONS:
PREGABALIN-GH is indicated for:

- Management of fibromyalgia/muscle pain and stiffness.
- Pregabalin is used with other medicines to help control partial seizures (convulsions) in the treatment of epilepsy. Pregabalin will not cure epilepsy and will only work to control seizures for as long as you continue to take it.
- Pregabalin works in the central nervous system (CNS) to control seizures and pain. It is an anticonvulsant and neuropathic pain agent.

CONTRAINDICATIONS:
PREGABALIN-GH is contraindicated in patients with known hypersensitivity to pregabalin or any of its other components.

WARNING AND PRECAUTIONS:

Angioedema:
There have been postmarketing reports of angioedema in patients during initial and chronic treatment with **PREGABALIN-GH**. Caution should be exercised when prescribing postmarketing reports of angioedema in patients during initial and chronic treatment with **PREGABALIN-GH** to patients who have had a previous episode of angioedema.

Hypersensitivity:
There have been postmarketing reports of hypersensitivity in patients shortly after initiation of treatment with **PREGABALIN-GH**.

LAST REVISION DATE: 12/2021

**Prégabalin Gélules BP 25/75 mg
PREGABALIN-GH® 25/75**

Suicidal Behavior and Ideation:
Antiepileptic drugs (AEDs), including **PREGABALIN-GH** increase the risk of suicidal thoughts or behavior in patients taking these drugs for any indication.

Peripheral Edema:
PREGABALIN-GH treatment may cause peripheral edema. In short-term trials of patients without clinically significant heart or peripheral vascular disease, there was no apparent association between peripheral edema and cardiovascular complications such as hypertension or congestive heart failure.

Dizziness and Somnolence:
PREGABALIN-GH may cause dizziness and somnolence.

Abrupt or Rapid Discontinuation:
Following abrupt or rapid discontinuation of **PREGABALIN-GH**, some patients reported symptoms including insomnia, nausea, headache, and diarrhea.

Creatine Kinase Elevations:
PREGABALIN-GH treatment was associated with creatine kinase elevations.

Decreased Platelet Count:
PREGABALIN-GH treatment was associated with a decrease in platelet count.

ADVERSE EFFECT:
Less common
Difficult or labored breathing, shortness of breathlessness in the chest

Rare
Blistering, peeling, or loosening of the skin, chills, cough, diarrhea, difficulty with swallowing, dizziness, fast heartbeats, hives, itching, joint or muscle pain, puffiness or swelling of the eyelids or around the eyes, face, lips, or tongue, red skin lesions, often with a purple center, red, irritated eyes, skin rash, sore throat, sores, ulcers, or white spots in the mouth or on the lips, unusual tiredness or weakness

More common
Accidental injury, bloating or swelling of the face, arms, hands, lower legs, or feet, blurred vision, burning, tingling, numbness or pain in the hands, arms, feet, or legs, change in walking and balance, clumsiness, confusion, delusions, dementia/difficulty having a bowel movement (stool), difficulty with speaking, double vision, dry mouth, fever, headache, hoarseness, increased appetite, lack of coordination, loss of memory, lower back or side pain, painful or difficult urination, problems with memory, rapid weight gain, seeing double, sensation of pins and needles, shakiness and unsteady walk, sleepiness or unusual drowsiness, stabbing pain, swelling, tingling of the hands or feet, trembling, or other problems with muscle control or coordination, unusual weight gain or loss

Usage in pregnancy
PREGABALIN-GH should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus

Pediatric use
The safety and efficacy of pregabalin in pediatric patients have not been established.

DRUG INTERACTIONS:
There are no pharmacokinetic interactions between pregabalin and the following anti-epileptic drugs: carbamazepine, valproic acid, lamotrigine, phenytoin, phenobarbital, and topiramate. Important pharmacokinetic interactions would also not be expected to occur between **PREGABALIN-GH** and commonly used antiepileptic drugs.

OVERDOSAGE AND TREATMENT:
There is limited experience with overdose of **PREGABALIN-GH**. The highest reported accidental overdose of **PREGABALIN-GH** during the clinical development program was 8000 mg, and there were no notable clinical consequences. In clinical studies, some patients took as much as 2400 mg/day. The types of adverse reactions experienced by patients exposed to higher doses (>900 mg) were not clinically different from those of patients administered recommended doses of **PREGABALIN-GH**.

Treatment or Management of Overdose :
There is no specific antidote for overdose with **PREGABALIN-GH**. If indicated, elimination of unabsorbed drug may be attempted by emesis or gastric lavage; usual precautions should be observed to maintain the airway. General supportive care of the patient is indicated including monitoring of vital signs and observation of the clinical status of the patient

STORAGE INSTRUCTIONS :
Store below 30°C. Protect from light and Moisture.
Keep out of reach of children.
